---

## Summary

Software engineer with hands-on experience building full-stack and AI-powered applications using JavaScript, TypeScript, React, Next.js, and Node.js. Experienced collaborating on production-oriented AI systems, REST APIs, and modern web applications through Resilient Coders while leading technical community initiatives as Boston Chapter Lead for Latinas in Tech. Interested in building scalable software and AI-powered applications that improve how people work and interact with technology.

---

## Skills

**Languages & Frameworks:** JavaScript · TypeScript · HTML · CSS

**Frameworks & Technologies:** React · Next.js · Node.js · Express.js · Bootstrap · Docker · EJS · Figma · MongoDB · Git · GitHub · CI/CD · Vercel · REST APIs · WebRTC · Socket.io

**AI & Development:** RAG · LLMs · Prompt Engineering · Semantic Search · Model Evaluation · Data Preprocessing · Agile/Scrum · Object-Oriented Programming · API Integrations · Responsive Design

---

## Work Experience

**AI Engineering Fellow** · Resilient Coders · Boston, MA (Remote)

February 2026 - May 2026

- Implemented data preprocessing workflows that boosted consistency across model evaluation pipelines, facilitating reliable testing and experimentation within a cross-functional AI engineering team.
- Evaluated LLM performance through iterative testing and quantitative evaluation metrics, uncovering opportunities to increase model quality and response accuracy.
- Debugged AI application workflows by identifying issues across model pipelines and collaborating with teammates to deliver stable, production-ready features.

**Full-Stack Developer** · Resilient Coders · Boston, MA (Remote)

August 2025 - December 2025

- Designed RESTful APIs to handle scalable backend functionality, enabling efficient data exchange between client and server applications.
- Built 8 full-stack web applications using JavaScript, Node.js, Express, and EJS, including RESTful APIs and responsive user interfaces, while applying scalable backend architecture principles.
- Collaborated in Agile sprints with a 20-person engineering team, participating in code reviews, pull requests, and weekly feature releases while following Git-based development workflows.

**Data Processing Assistant** · Northern Essex Community College · Haverhill, MA

December 2024 - August 2025

- Maintained and validated institutional datasets supporting academic and administrative reporting, ensuring data accuracy across multiple internal systems.
- Streamlined data verification processes by identifying recurring inconsistencies and improving the reliability of institutional reporting.
- Digitized thousands of institutional records spanning over 65 years, transforming historical paper records into searchable digital data that improved accessibility and long-term data preservation.

---

## Projects

**BODY/DOUBLE** · [github.com/NaimaBogran/body-double](https://github.com/NaimaBogran/body-double) · Virtual Coworking Platform

- Designed a responsive user experience that enabled users to create, join, and manage virtual coworking sessions across devices.

- Developed intelligent partner-matching logic that allowed users to filter compatible work partners based on shared preferences and availability
- Integrated Socket.io and WebRTC to support reliable real-time communication and seamless virtual coworking sessions.

**Multilingual AI Document Assistant** · [github.com/Resilient-Labs/multilingual-ai-document-assistant](https://github.com/Resilient-Labs/multilingual-ai-document-assistant) · Document Assistant

- Built an AI-powered multilingual document assistant using Next.js, TypeScript, and retrieval-augmented generation (RAG) to enable multilingual document understanding and question answering
- Implemented semantic search, LLM-powered summarization, safety detection, and multilingual question answering to improve information retrieval across uploaded documents
- Collaborated on a privacy-first architecture using stateless APIs and zero-retention processing to protect sensitive user data while maintaining application performance

---

**Education**

---

**Northern Essex Community College** | Associate's Degree  
Computer Science

---

**Certifications**

---

**Google AI Fundamentals** | Coursera March 2026

---

**Volunteer Experience**

---

**Chapter Lead** · Latinas in Tech · Boston, MA March 2026 - Present

- Lead marketing and communications initiatives for the LiT Boston Chapter, creating social media content and managing email campaigns to support community engagement and chapter events.
- Drove 88.5% follower growth, 74% increase in unique visitors, and 50% rise in page views for LiT Boston's LinkedIn by leading marketing and communications strategy.
